

11. Non-Fiction – Personal Growth

ASK AND YOU SHALL RECEIVE by Pierre Morency

Bringing together his education as a physicist and his insatiable curiosity, Pierre Morency challenges assumptions that we take for granted and proves that the world is quite different than we think. In this unnerving book, he urges us to replace our learned beliefs with others that come from experimentation. He demonstrates convincingly that the earth is a paradise and that to get what we truly want out of life, all we have to do is ask.

Why must we abandon our need for security if we want to increase our income? Why must we stop working more than 35 hours a week? Why must we allow children to educate adults? And why must we learn to develop our spinal antenna? *Ask and You Shall Receive* gives you the answers to these questions and many more!

For more than 20 years, **Pierre Morency** has experimented with the laws of success as an engineer/physicist, author, speaker, and consultant.
