

13. Non-fiction – Essay

AU BOUT DU PÉTROLE / AFTER THE LAST OIL BARREL by Normand Rousseau

Everything You Need to Know about the Energy Crisis World Oil production at its Highest Level!

Everywhere on the planet, the big oil fields are drying-up while oil prospectors are coming back empty-handed from exploration trips. While it is harder and harder to extract oil, demand for oil has exploded everywhere. The energy crisis is at our door and governments seem asleep at the switch! This book explains all you need to know to understand what is at stake in today's energy crisis, from the high cost of oil at the pump to pressures to construct harbours for tankers and the impact of the Alberta oil sands.

Internationally known scholar, Normand Rousseau provides readers with information that is easy to understand, clear and independent. The conclusion of his book is shocking: in energy matters, politicians of all stripes behave like ostriches with their head in the sand! (Book published in French)

Normand Rousseau is Physics professor at Université de Montréal and a well-known international scholar. He is passionate about making today's scientific issues accessible to the general public. He has written many articles for *Québec Science* magazine and, since 2005, writes the physics blog on the web site of the Agence Science Presse.
