

## 22. Non-Fiction – Scientific Thought

### **MYSTÈRE SANS MAGIE – Science, doute et vérité / MYSTERY WITHOUT MAGIC – Science, Doubt and Truth by Cyrille Barrette**

*Mystery Without Magic* is a book about the nature of science. But, most of all, the book is an eulogy of scepticism, an indictment against the religious indoctrination of children, an attack against the soft thought of our time which allows charlatans to prosper and a call to all of us to free ourselves from our childhood gullibility in order to find the true wonder where it really lies: in the treasury chest of the world's wonders.

According to the author, science is neither an ideology, a doctrine, nor a religion. It is nothing else but a method, a way of thinking. And it is the most precious invention of the human spirit!

This unique book will open every reader's mind to the benefits of science and how scientific knowledge truly helps us all to understand the world we live in.
